However, comparative evaluation of such marketing data is extremely difficult due to differences in manufacturers' terminology and test methods. Standard test methods, such as the ASTM E28xx series can be used to provide objective and reliable data on robot capabilities. Responders can trust the data captured at any participating accredited test facility, no matter when or where the testing was conducted.</p> <p>"Home-grown" performance specifications often result in requirements that compete or conflict with each other. This has consistently led either to inadequate performance, excessive cost, or both. Purchasers should make purchasing decisions by specifying available combinations of robotic capabilities as defined in standard test methods that reflect their envisioned mission tasks.</p> <p>Responder robot test methods have been (and continue to be) developed by DHS S&T/NIST/ASTM, including tests for capabilities specific to counter-IED operations involving packages, personnel, and vehicles. A suite of standard test methods has been published through the ASTM International Committee on Homeland Security Applications; Operational Equipment; Robots (E54.08.01), and additional standard test methods are published yearly. Purchasing organizations should require that candidate robot manufacturers have their robots evaluated according to the applicable ASTM standard test methods, and require that each manufacturer provide a copy of the completed test method charts indicating how the robots scored in the requested suite of tests.</p>	Amtrak - (IPR - Amtrak), Intercity Bus Security Grant Program (IBSGP), Operation Stonegarden (OPSG), Port Security Grant Program (PSGP), State Homeland Security Program (SHSP), Tribal Homeland Security Grant Program (THSGP), Transit Security Grant Program (TSGP), Urban Areas Security Initiative Program (UASI), Homeland Security Grant Program (HSGP)

Allowable uses for CBRNE terrorism prevention and response watercraft include protection of ports, critical waterways, dams, reservoirs, rivers, and large lakes. To be eligible, these waterways must be identified as a critical asset to the state through a vulnerability assessment. Allowable costs for this watercraft category include the purchase of watercraft, as well as customary and specialized equipment necessary to enable such watercraft to support the homeland security mission. Licensing, registration fees, insurance and all ongoing operational expenses are the responsibility of the grantee or local units of government and are not allowable under these grant programs. Prior to obligating funds in this equipment category for missions other than port security, grantees must obtain a written waiver from FEMA by consulting with their Program Analyst and providing a detailed justification for the request. For additional information on the specific requirements for acquiring controlled equipment see Information Bulletin 407: Use of Grant Funds for Controlled Equipment. These requirements apply to equipment purchased with funds awarded after October 1, 2015.</p> <p>This category allows for the purchase of special-purpose aviation equipment where: (a) such equipment will be utilized primarily for homeland security objectives and permissible program activities; and (b) the costs for operation and maintenance of such equipment will be paid from non-grant funds. Allowable costs include the purchase of customary and specialized equipment necessary for CBRNE prevention, response and/or recovery.</p> <p>For awards made before October 1, 2015, grantees must obtain a waiver from FEMA by consulting with their Program Analyst and providing a detailed justification for obligating funds in this category, and receiving approval to obligate funds. The detailed justification must address the following requests: 1. The used, but operable instrumentation provided through HDER constitutes a rapid, short-term solution to the immediate needs of emergency responders for this equipment. With the recent adoption of new ANSI standards, it is envisioned that the new standards-based equipment will ultimately be substituted for HDER equipment as the new equipment becomes more widely available and as state and local budgets allow. As in past years, FEMA grant funds may be used to support the maintenance, calibration and disposition of equipment obtained through the HDER Program.
